1. Familiarize yourself with the anatomy of a step (fig. 1).
2. When cutting your returns, please view stairs from the bottom to determine if a left or right return is required.
3. Familiarize yourself with the contents of your FrameriTread™ carton.

The Anatomy of a step

fig. 1

Contents of your FrameriTread™ Carton

- FrameriTread™
- Back Return Corner Spline (taped on top of FrameriTread™)
- Short Spline
- Short NoseFill™
- Short FrameriCap™
- Long Spline
- Long FrameriCap™
- Long NoseFill™
- Instructions

*NOTE: The front and 2 sides of your FrameriTread™ are channelled, while the back is flat

CHANNELED

*NOTE: One edge of your Long and Short FrameriCaps™ are channelled. This is the top edge. This edge will engage the spline that joins the FrameriCap™ to the FrameriTread™.

FLAT

*NOTE: One edge of your Long and Short NoseFills™ are flat. You will apply your adhesive to this edge and install to the face of your existing tread (if needed).

WARNING TO CALIFORNIA RESIDENTS

This product may be a wood based product, and wood dust may be generated while cutting, sawing, sanding, machining or otherwise altering this product. Wood dust has been classified by the state of California (OEHHA PROP 65) as a substance known to cause cancer.

This product is CARB Phase 2 93120/EPA TSCA Title VI compliant for formaldehyde.

It is recommended that respiratory protection be used when engaging in activities with respect to this product which may result in exposure to wood dust.

**DO NOT PROCEED WITH INSTALLATION UNTIL THESE
INSTALLATION GUIDELINES HAVE BEEN COMPLETELY REVIEWED**

Preparing for your project

1. Start by removing any carpet, pad, tackstrip, staples or glue from your stairs.
2. Remove spindles from your staircase prior to installing FrameriTread™ products.
(Tip: number the spindles and create a template / record of existing spindle recesses / holes)
3. Ensure your workspace is free of dirt and debris prior to installation.
4. FrameriTread™ requires a bullnose on existing stair treads. Most existing treads have a bullnose. If so, skip to page 4. If your existing tread does not have a bullnose, continue on this page.

DO NOT REMOVE BULLNOSE

If your staircase has an existing bullnose:
Proceed to page 4.

NO BULLNOSE?

If your staircase does not have an existing bullnose:
Please follow next set of instructions to
install your Frameri® Nosefill™.

Installing your NoseFill™

Cutting your Nosefill™

1

Measure the length of the existing stair tread and draw a pencil line at the measured length on the long NoseFill™.

2

Cut a mitered edge (45° angle) at the drawn line on your long NoseFill™.

3

Measure the depth of the existing stair tread and draw a pencil line at the measured depth on the short NoseFill™.

4

Cut a mitered edge (45° angle) at the drawn line on your short NoseFill™.

Installing your NoseFill™

5

Using urethane based construction adhesive, apply a ¼" bead down the length of the flat end of your long NoseFill™.

6

Place and *nail* the long NoseFill™ on the front face of your tread.

7

Apply a ¼" bead of the adhesive down the length and miter of your short NoseFill™.

8

Place and *nail* the short NoseFill™ on the return face of your tread.

9

Remove any excess adhesive immediately.

Allow sufficient adhesive dry time before proceeding to FrameriTread™ installation.

Cutting your FrameriTread™

1

Place long FrameriCap™ on front stairnose and draw a pencil line.

TOP VIEW

2

Measure from line to riser, and mark measured depth on your FrameriTread™.

** Make sure your cut line is not on the channeled edge*

3

Place short FrameriCap™ on return part of the stairnosing and draw a line.

TOP VIEW

4

Measure from the drawn side line to the opposite end and mark measured length on your FrameriTread™.

** Make sure your return cut line is opposite the return, leaving channel on return side uncut to accept spline.*

5

Cut your FrameriTread™ to the measured cut lines.

** Do not cut the front (channeled) edge or return side (channeled) edge of FrameriTread™.*

Mitering your FrameriTread™

6

Mark the measured length of the FrameriTread™ on the long FrameriCap™.

Installing your FrameriTread™

7

Cut a miter on the long FrameriCap™ to measured length, as shown.

8

Miter appropriate end of the short FrameriCap™, as shown.

9

Place the front Framericap™ in position, then match up the mitered corner of the return Framericap™. Once both mitered corners are in place, make a mark on the back end of the return where the stair ends.

10

Miter the back end of the return FrameriCap™ at the drawn mark, as shown.

***Make sure mitered edge is past end of step.**

11

If needed: After back end miter is cut, put all FrameriCaps™ in place and measure and cut for the back return.

Creating Your Long Spline

12

Measure the channeled end of your cut FrameriCap™.

Mark that measurement on your long spline.

Installing your FrameriTread™

13

Cut spline at drawn line.

14

Insert spline into channel of the FrameriCap™ with 1/2 inch exposed on the miter side, leaving spline 1/2 inch short on the other side, as shown. This will later engage the return FrameriCap™.

15

Use a mallet to fully engage spline into channel.

Creating our Return Spline

16

To prepare the return spline, measure the channeled end of your cut FrameriCap™.

Then cut your return spline 1 1/4" shorter than measured length.

17

Push spline into channel of the FrameriCap™ leaving 5/8" short on both sides, as shown.

18

Use a mallet to fully engage spline into channel of return cap.

Assembly

19

When assembling the mitered corner, insert the interlocking splines into the channels of the FrameriTread™.

20

Dry fit the assembled FrameriTread™ onto the step ensuring a correct fit. If tread does not fit or has to be forced to fit, check measurements and recut.

Assuring correct fit, remove return FrameriCap™, **apply adhesive to front return miter only** and reassemble.

***To avoid excess adhesive, apply to front return miter only.**

21

Using urethane based construction adhesive, apply a ¼" bead around the perimeter of the step and throughout the middle of the step in a serpentine pattern. Then along your bullnose/nosefill.

Important to apply glue to this surface

22

Carefully position FrameriTread™ on step and slide into place.

First push down.

Then slide into place.

23

Remove any excess adhesive immediately.

24

Install back return corner spline as shown.
Assemble back return.
Tape until dry if needed.

25

REPEAT THE PROCESS FOR EACH STEP.

THANK YOU FOR CHOOSING
